I. Overview.

Paypal Adaptive Payment plug-in allows website owner handles payments between a sender of a payment and one or more receivers of the payment.

II. Configuration

From admin cpanel go to menu System -> Configuration then click to **Payment Methods** link on left navigation. Find the **Paypal Adaptive Payment** section.

Not sure what PayPal payment method to use? Click [here](#) to learn more.

The screenshot shows a configuration interface for PayPal Adaptive Payments. At the top, there is a list of menu items: Merchant Location, PayPal All-in-One Payment Solutions (with a sub-note: "Accept and process credit cards and PayPal payments."), PayPal Payment Gateways, PayPal Express Checkout, and PayPal Adaptive Payments (which is currently selected). Below this list, there is a section for "PayPal Adaptive Payments" with the following text: "Enable merchants send money peer-to-peer, split payments in both parallel and chained models, accept guest payments, and schedule disbursements." Underneath this text is a "PayPal Adaptive Payment" section with the sub-text "Accept credit card and PayPal payments securely." To the right of this text are logos for MasterCard, VISA, DISCOVER, and AMEX, and an orange "Configure" button. Below the "PayPal Adaptive Payments" section is another list of menu items: Saved CC, Bank Transfer Payment, Check / Money Order, Cash On Delivery Payment, and Zero Subtotal Checkout.

Click to **Configure** button to setup the paypal adaptive payment method.

Enable this Solution	<input checked="" type="checkbox"/> <input type="text" value="Yes"/>	[WEBSITE]

- Payment Type: The type of adaptive payment Parallel or Chained.
 - **Parallel:** If you own a shopping cart, you are not required to receive payments directly. You can facilitate payments between the sender and receivers that provide the actual goods. With parallel payments, the sender can see the transaction to each receiver.

Parallel payments

- **Chained:** The sender pays the primary receiver an amount, from which the primary receiver pays secondary receivers. The sender only knows about the primary receiver, not the secondary receivers. The secondary receivers only know about the primary receiver, not the sender.

Chained payments

- Payment Action Type: if you choose payment type is Chained this option will be displayed. You can set the payment to vendor is Instant or Delayed.

- Instant: Vendor will get the payment as soon as customer pay for the order.
- Delayed: Payment will be hold in x days then it will be released to vendor.
- Fee Payer: Admin can specify who will pay for paypal fee.
 - Website Owner and Vendors: Each receiver pays their own fee.
 - Customer: Customer pays all paypal fees.**Use for Parallel payments only.**
 - Website Owner: Website owner pay all paypal fees.**Use for Chained payments only.**
- Email Associated with PayPal Merchant Account: The paypal email account.
- Sandbox Mode: Enable/disable sandbox mode.
- Enable this Solution: Enable/Disable the payment method.

III. Vendor config paypal payment method
